GLAD GARDENS

R.F.D. # 2
BLOOMINGTON ILL.

GREETINGS

I take pleasure in presenting my catalog of gladiolus bulbs for 1953 for your consideration and to extend thanks and best wishes to my many friends and customers for the nice orders sent me in 1952.

I hope this catalog will be of interest to you and help you to grow some of the best spikes you have ever had. I am not going into much detail as to our method of growing of what we believe to be as nice as any bulbs anywhere. We have never had a complaint about our bulbs or our dealing. We have had many letters and cards commenting us on our bulbs and the splendid results obtained. I believe this speaks for its self more than any words I can use. I assure you I appreciate these letters and cards.

I would like to say a few words about our seedlings. We planted about 2000 seedling bulbs last spring. Nearly all of them bloomed. It was quite an experience to go out in the patch in the morning to see what had opened up during the night. There were no two alike, some were very outstanding, some were worthless, but we selected about 200 to try again. We are going to plant more seed than we have ever planted this spring. I hope to get something good from them but time will tell. I grew some for the second year this season and they did very good especially for the adverse weather we had here this season. I will not introduce any unless they prove to be good. It looks like 2 or 3 of them will be good.

We sell only youngbulbs grown from bulblets or small planting stock and are not robbed of their vitality with fertilizers or over watering. I do not condemn fertilizers or watering, some times they are necessary but can be over done.

OUR GUARANTEE We guarantee satisfaction or money back and I mean just that. If you are not satisfied, return them and I will cheerfully refund your money. We guarantee our bulbs true to name and young healthy bulbs free of thrips. Our bulbs are all treated with Spergon & D.D.T. at digging time and again at cleaning time.

While we have not had any complaints about our bulbs, If you should have any please let us know. Maybe we can help you.

We can not guarantee the crop you will harvest as there are too many things beyond our control which makes this impossible, nor can we guarantee bulblets to all grow. Some will germinate nearly 100% but others will not. Some times small bulbs will not germinate but not many that don't. Varieties that are sports will sometimes revert but not too many. We usually put extras anyway so you should get you full amount of blooms.

READ BEFORE ORDERING

All orders of \$2.00 are postpaid, Order as listed do not split quantities to make a lower price except when listed by 12 you may order 6 at half the price of 12 ,cash must accompany order by personal check, money order or bank draft, please do not send stamps or currency as your order could get lost and we could be blamed and we don't want that to happen. We acknowledge your order soon after receiving it as possible if you do not receive one in 10 days write us as maybe we didn't receive the order, All stock is guaranteed true to name and free of thrips and any visible disease, all stock is offered subject to stock on hand and prior sale our bulbs are all grown here in McLean County by us we do not get bulbs from other growers to fill your order without your permission. Where bulblets are listed by the package will contain 50 to 100 depending variety we give good value. Be sure to order early we have good stocks of most varieties some are bound to be sold out before spring so to avoid disappointment order early.

INSPECTION our bulbs are all carefully inspected at digging time, again at cleaning and grading time, also field and storage by an AUTHORIZED STATE INSPECTOR a certificate of inspection accompanies each order.

FILLING YOUR ORDER we fill all orders as received we place the bulbs in ventilated bags and set them back with your name on them they are again inspected when packed for shipment, when receiving several orders in one day we fill orders with the earliest post mark first.

EXTRAS we always put in some extras for you to try we appreciate it very much if you will list a few you would like to try we will include them if possible

PRICES OF BULBS the price of a bulb has nothing to do with the quality nor its production it only means that stocks of the lower priced varieties are larger than of the higher priced varieties, We like to keep in line with the originator on the price of the new ones but some times we have no way of knowing what it is so we have to do the best we can if we are lower you win if we are higher we will meet the price of any reliable cataloger.

We are mimeographing our catalog again this year this helps to hold down expenses and we pass this saving on to you in the price of bulbs especially in standard varieties we don't feel a catalog has any thing to do with the quality of the bulbs, we send complete culture directions with each order by a leaflet prepared by NORTH AMERICAN GLADIOLUS COUNCIL. By following this leaflet you should be able to grow some very outstanding spikes, here is a paragraph taken from this leaflet "better results can be expected from young high crowned bulbs of at least 1 inch in diameter than from older and larger "thin" bulbs.

The descriptions on varieties are as we see them in our fields I am not casting any reflections on no one if I condemn a variety, that doesn't mean it won't do good for you. It is a known fact that some varieties will do better in some localities than in others, we try to grow varieties that have as wide a range in this respect as possible.

I don't list as many of the new varieties as some catalogers do, but we like to grow them a year or two if they are not good I do not want to list them. however we can not grow them all so there may be others just as good.

We are discarding many of the older sorts this year, and are not listed it isn't that they were not good but we have to make room for the many new varieties and our own seedlings. As you thumb through this catalog you will notice we have added several new varieties to our list, we have grown in our own field and are all very good. I highly recommend them. We don't take in as many shows as maybe we should but, we do win our share of blue ribbons in the few shows we do attend.

BULB SIZES gladiolus bulbs are graded in 6 sizes no.1 $1\frac{1}{2}$ " or over no.2 $1\frac{1}{4}$ to $1\frac{1}{2}$ no.3 1 to $1\frac{1}{4}$ no.4 $\frac{3}{4}$ to 1 no.5 $\frac{1}{2}$ to $\frac{3}{4}$ no.6 under $\frac{1}{2}$ in. no.1&2 are large bulbs no.3&4 are medium bulbs no.5&6 are small bulbs we ship the larger size in each class as long as they last, if medium bulbs are ordered we ship size no.3 so if you get two sizes it means we have run out of the larger size.

One question I would to clear up is so many folks visiting our fields have asked if we are connected with some nursery or bulb grower. I am happy to say that we are not connected with no other nursery or bulb grower in no way.

VISITORS are always welcome to our fields, to look over the many new varieties and seedlings we have on trial, and to ask questions, we are always ready and willing to help you in anyway we can.

We are located just 3mi. South East of Bloomington on a good gravel road.

PRIMULINUS AND MINIATURE GLADS.

Miniature and Small type Glads are the ones used for tables, weddings, corsages, and they also have there place on the show table when it comes to winning blue ribbons.Don't think your glads have to be giant to get ribbons as the little ones have color class that the big ones don't have. Why they are higher in price is they aren't grown as plentiful as the big ones. You'll have to grow a few to really appreciate them. So try a few this year, it will be well worth your while.

*** CLASSIFICATION ***

First is the name of the variety then in parenthesis is the name of the
originator. Following this is the size and color figures. The last
figures denote the number of growing days required from planting to date
of blooming. The number of days to bloom is figured for large bulbs;
medium bulbs usually require 5-7 days longer to bloom. Because of vari-
ations in climate, the number of days required for a particular variety
to bloom may vary by several days. However, the listed blooming dates will
give a fair idea of what to expect of a variety.

Sizes-

Miniature Glads--100 (Florets under 2 1/2 inches).

Small Glads--200 (2 1/2" through 3 1/4").

Medium Glads--300 (Above 3 1/4" through 4 3/8").

Large Glads--400 (4 1/2" through 5 3/8").

Giant Glads--500 (5 1/2" and larger).

For example, the classification number of TYRONE is 466. The 400 means that the floret size is $4\frac{1}{2}$ through $5\frac{3}{8}$ and the 66 indicates it is a lavender. Hence the numbers listed right after the variety name tells the size and color of the individual floret as grown from large bulbs. The NAGC size and color classification is used in our descriptive list. This method of listing gives you valuable information which you will readily note above. This Classification is used mainly to help you classify varieties for show purposes.
